

Members,

I made a trip to the Globe Onyx site this past Saturday April 5, 2014. I have updated the material and site photos. The road up to the hill from FS303 has gotten much worse with deeper ruts due to continued erosion. There was evidence of recent illegal use of heavy Machinery to obtain material at the site. This activity has exposed a large section of the Onyx seam just to the right of the track at the top of the hill.

I will be adding a Rose Quartz trip by the end of April.

Happy Rock Hunting
