

How to Extract Photos from the Zip file

After you have saved the photo Zip file on your computer you will notice that the

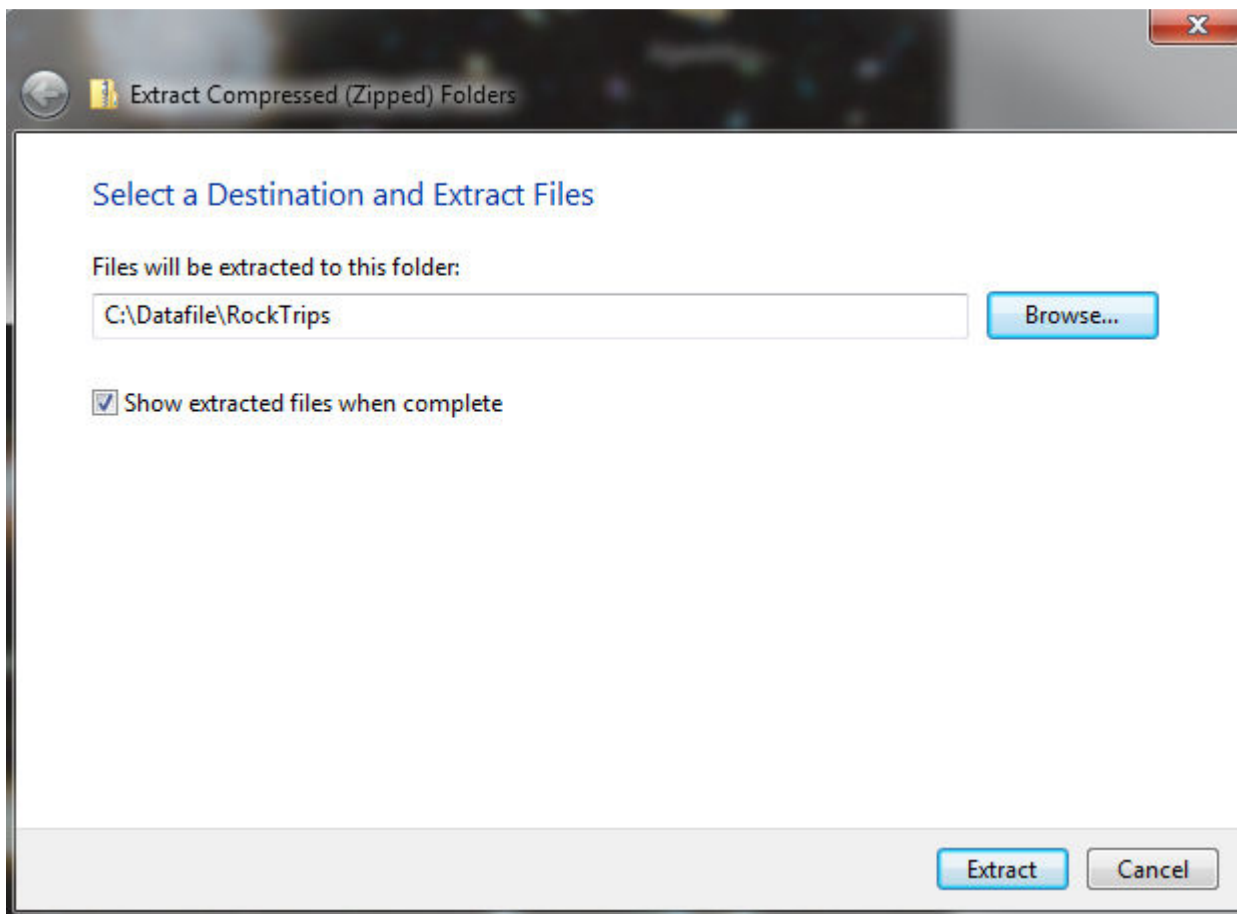

Icon for the file is a folder with a zipper: 

Right click on the Zip file and you will see the following pop-up window:

Select the Extract All... Option and you will see the following screen:

How to Extract Photos from the Zip file

Choose a destination using the Browse button, Select/Unselect the check box to show files when the extract is complete, then click on the Extract Button.

When the Extract is completed you should be able to view the photos using Windows Photos Viewer.
