

Dear Members.

I returned to the Horseshoe Lake collecting area in December of 2015. The road to the site is greatly improved and now any vehicle can make it to the final left turn onto FS1530. High clearance is required after that or you could hike the final ½ mile.

I have updated the site photos creating an album. I have included 2012 and 1025 images of the lake which are quite revealing. Seems we are benefitting from this season's El Nino as the lake is beginning to fill again.

I also updated the photos that are shown on the TOPO maps.

Happy Rock Hunting
